

MONITORING RESOURCES

Dr. Fone by Wondershare (drfone.wondershare.net)

Windows PC and Mac program that allows you to recover deleted text messages, contacts, and images from iOS and Android phones. Does not work with all Android phones but we have had consistent results with iOS.

Elite Keylogger (elitekeyloggers.com)

For Window and Mac computers, Elite Keylogger logs all keystrokes on the computer and takes screenshots at intervals that you determine. Allows you to monitor your child's activity on your home computer.

Work Examiner (workexaminer.com)

Developed for business computer monitoring, Work Examiner is a great way to monitor all activity on Windows PCs. Work Examiner requires 2 computers because your child's data and logs are stored on another computer in your home and NOT sent to a cloud location. We highly recommend that you try to free trial to make sure this program will for you.

ActivTrak (activtrak.com)

ActivTrak allows you to monitor all computer activity on Windows, Mac, and Chrome OS computers. All data is sent to their cloud servers and access via your ActivTrak account.

CleanBrowsing (cleanbrowsing.org)

Free content filtering for your computer or your whole home network. CleanBrowsing is a DNS monitoring service that filters inappropriate content before it reaches your computer or home network. CleanBrowsing's paid accounts also allow you to create custom filters and view logs.

Circle (available on Amazon)

We recommend the 1st Generation Circle which is still currently available on Amazon (2nd Gen Circle requires a monthly subscription.) Circle allows you to setup home profiles for each family member's devices and limit and log internet access for those devices. Requires iOS or Android device to setup and administrate.
